**Final Dissertation, External Time Table  
 M. Tech. IV Semester**

Time: 12: 00 am Onwards

All the students of M. Tech. IV Semester are hereby informed that their External examinations are going to be held online according to the following schedule.

S. No.	Date	Day	Subject Code	Subject Name
1.	08/07/2020	Wednesday	MECM401	Dissertation Part-II

  
 Head  
 CMD IPSA IES

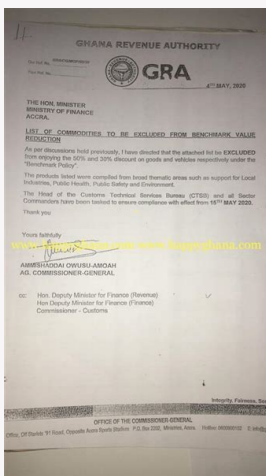

**INSTITUTE OF ENGINEERING & SCIENCE  
 DEPARTMENT OF CHEMICAL ENGINEERING**

Approved by AICTE, New Delhi, Affiliated to RGPV Bhopal

Ph.0731-4014606, Telefax:0731-4014602

UNIVERSITY OF CALIFORNIA, BERKELEY  
 Fall Semester 2018

Dept. of Civil and Environmental Engineering  
 Instructor: Filip C. Filippou

**CE 121 - STRUCTURAL ANALYSIS**

**Course Objective**

Structural analysis is the process of computing and interpreting the internal forces and displacements in the model of a structural system under imposed forces, displacements and environmental effects. Consequently, analysis is an integral part of the structural design process. The objective of this course is two-fold: (1) develop the modern theory of structural analysis, and (2) improve understanding of structural system behavior through modeling and analysis. Underlying the theory of structural analysis are three key concepts: equilibrium of applied and resisting forces, compatibility of displacements with deformations, and the relationship between internal forces and deformations. Equilibrium and compatibility are closely related through the principle of virtual work. Analysis methods are formulated in matrix form, making them suitable for small and large structures and for easy numerical solution with today's matrix algebra software. Software packages that support matrix operations are of great help with the tedium of repetitive calculations in homework assignments. Two suitable desktop computer packages for this task are Mathcad® and Matlab®.

Mathcad is relatively easy to learn, has a user-friendly interface and is useful in analysis and design. Its printed output has the look of a word processor and is, thus, suitable for conveying calculations to others. Thus, it is a great tool for documenting analysis and design calculations in professional practice. The latest product release is Mathcad Prime 5.0 but any of the earlier Mathcad releases 13, 14 and 15 suffice. Mathcad Express Prime is available for free download and is also installed on the CEE computing network in Davis Hall. Mathcad Prime 4.0 is available from JourneyEd or from the Academic SuperStore for \$107.95.

Matlab's user interface is not as user-friendly as Mathcad's and its documentation abilities are in continuous improvement with every new version. The impressive collection of built-in array functions, its great plotting capabilities, and its powerful scripting and programming abilities make it ideal for advanced studies and research. For this reason it is used in several graduate and undergraduate courses at UC Berkeley. The latest Matlab version is available from <https://software.berkeley.edu/MATLAB> for UC faculty, students and staff. The latest student version Matlab R2018a is available from Mathworks for \$99 including several very useful toolboxes. Matlab R2018a is installed in the CEE computing network in Davis Hall. The structural analysis toolbox FEDEASLab is based on Matlab. It will be used in the course for structural system studies. The necessary functions will be posted on bCourses and on the CEE network.

**Prerequisites**

An introductory course in Structural Engineering (CE 120 or equivalent) is a prerequisite. Good background in strength of materials is important. Good background in applied linear algebra is very useful.
